ORION 2016 Kindergarten to Grade 12 Leadership Award Winner

About Éric Minoli

Éric is Chief Technology and Optimization Officer at Groupe Média TFO, where he is responsible for the technology department, information systems, broadcasting hardware, web platforms infrastructure, as well as optimizing workflows.

Éric leverages ORION's fibre-optic network in two ways: to provide high-quality, French-language content to K-12 learners, and to stream multimedia to classrooms across Ontario and abroad through national and international research and education networks. Engaging with this educational, rich content is one of the powerful ways that educators and students can integrate 21st century competencies into learning. This helps students to be prepared for and successful in a technologically intensive world.

Éric also helps deliver IDÉLLO's high-quality video content worldwide. IDÉLLO is TFO's new platform that provides teachers, educators, students and parents with a powerful digital platform, and is designed to cater and adapt to different types of learning.

Éric has an honors bachelor's degree in Broadcast Television from *Université de Provence*, and comes from a career in television operations leadership. He is an executive member of the Media Management Commission of FIAT (a professional association for media broadcasters), and has published papers for the European Broadcasting Union and FIAT.
